

Session 25 : Deliver & Reflect

You've spent 25 sessions learning how AI works, where it's used, and what responsibilities come with it. For the last four sessions, you've investigated how AI is being applied in a domain you chose - gathering sources, analyzing bias and safety, and writing a research paper. Today, you deliver that investigation, defend it, reflect on your journey, and map your future path.

Objectives

By the end of this hour, you will have accomplished the following:

Delivered

Your presentation

Defended

Your investigation under journal-reviewer-style questions

Received Feedback

From your mentor on your work and growth across 25 sessions

Reflected

On what changed in you across 25 sessions

Mapped Pathways

Specific next steps for what comes after this program

Your Presentation

You'll present your investigation now, using the Gamma slides you built and practiced.

Sample of Questions after Presentation

Category	Sample Question
Methodology	Why did you investigate this domain in the way you did?
Validity	How do you know the findings from your hands-on exploration weren't just specific to your particular setup?
Bias	Who would AI in this domain fail for, and why?
Safety	What's the most realistic way AI in this domain could cause harm?
Implications	What does your investigation mean for someone working in this domain?
Honesty	Where in your investigation did you most rely on AI tools? How did you verify what they produced?

Mentor Feedback

After hard questions, your mentor will give you specific feedback on your work and your growth across 25 sessions. Five things they'll cover:

What	What It Sounds Like
Your biggest growth	What changed in how you think across 25 sessions
Your strongest section	Where your paper is most powerful
What you discovered about yourself	Skills, interests, capacities that emerged
What to be proud of	Specific moments of intellectual courage
What to keep developing	Specific skills to grow as you continue

Your Reflection

Before & After

What did you know about AI when we started? What do you know now?

Biggest Surprise

What surprised you most across 25 sessions?

Turning Point

Which session changed how you think? Why?

Proudest Moment

What did you build or investigate that you're proudest of?

Do-Over

What would you do differently if you started over?

Meaning

What does AI mean to you now versus what it meant 25 sessions ago?

❶ There's no right answer to any of them. The goal is to articulate, in your own words, what changed in you.

Sharing Your Work

Your paper has been written to a structure used in research. Several journals accept submissions from student researchers like you.

Your Prompt Library

Your prompt library is the collection of tested prompts you built starting in Session 11 - for ChatGPT, Gemini, NotebookLM, image generation, audio generation, and more.

What It Is

Compiled into a single document - all the prompts you tested and refined across Sessions 11-21.

Why It Works

The prompts are specific to use cases you encountered. They work because you tested them - not because someone else wrote them.

How to Use It

Use these prompts when you continue investigating, when you write papers in school, when you experiment with new AI tools.

What This Capstone Was Designed to Do

The capstone was designed to teach you four things you can do for the rest of your life. These skills compound - they apply to history papers, science investigations, professional reports, anything you'll need to investigate seriously.

Frame a Research Question

Take a topic and sharpen it into something investigable

Find Credible Sources

Distinguish real, useful sources from low-quality information

Investigate with Depth

Combine reading with hands-on understanding

Communicate Findings

Move from raw work to a polished paper and a clear presentation

What's Different About You Now

A useful question: what can you do now that you couldn't do before Session 1?

Real Work with AI Tools

You can use AI tools for real work, not just for fun

Detecting Hallucination

You can tell when AI is making things up

Bias & Safety Awareness

You can identify bias and safety concerns in AI applications

Serious Investigation

You can investigate a topic seriously instead of just looking things up

Research Writing

You can write to a research structure

Presenting Under Pressure

You can present ideas to people who'll ask hard questions

How Your View of AI Evolved

Where You Started

You started this program with whatever you thought AI was - perhaps a magic tool, perhaps a threat, perhaps something in between.

Where You're Ending

You're ending with a more accurate picture:

- A useful tool that can also be wrong, biased, and unsafe
- A technology that needs human oversight
- A field that's changing fast
- A domain being shaped by who builds it and how

The Research Framework

You started this capstone investigating one domain. You're ending it knowing how to investigate any domain.

This four-stage arc works for any topic you want to take seriously - AI in finance, climate solutions, mental health, local policy. Anything. The structure is portable. Take it with you.

Your Achievements

You Learned

How to think more carefully about a technology reshaping the world

You Investigated

Something that mattered to you, with rigor and honesty

You Wrote

A paper that didn't exist before - in your voice, about your findings

You Spent 25 Sessions

Doing real work.

Stay curious.
Stay honest.
Keep building.

The capstone ends. What you do next doesn't have to.
