

Session 19 Quiz - AI Careers & The Future of Work

Track B | Grades 9–12 | 20 Questions

Q1 [Type: MCQ | Difficulty: Easy | QID : 54833]

AI is changing work in three main ways: it _____ repetitive tasks, augments human skills to make us smarter and faster, and creates entirely new careers that never existed before.

- A. Creates
- B. Eliminates
- C. Automates
- D. Ignores

Correct Answer: C

Explanation: The three ways are Automates, Augments, and Creates. The cashier example illustrates automation in action: AI handles the scanning and counting (boring parts), while one human supervises six kiosks and focuses on connection, care, and complex problem-solving.

Q2 [Type: MCQ | Difficulty: Easy | QID : 54834]

A _____ writes precise, creative instructions that guide generative AI to produce exactly the right output - for example, turning a vague idea into a stunning image or a helpful response.

- A. Prompt Engineer
- B. Robotics Engineer
- C. AI Ethicist
- D. Data Scientist

Correct Answer: A

Explanation: Prompt Engineers are the "word wizards" of the Builder lane. The quality of AI output depends almost entirely on the quality of the prompt, which is why this role has grown so quickly - and why prompting skills built earlier in the course matter so much.

Q3 [Type: MCQ | Difficulty: Medium | QID : 54835]

An _____ is a Guardian-lane career: they ensure AI is fair, unbiased, and does not cause harm - testing for hidden discrimination and asking questions like "Does this treat all groups equally?" and "Who is accountable when AI makes a mistake?"

- A. AI Engineer
- B. AI Product Manager
- C. AI Ethicist
- D. Robotics Engineer

Correct Answer: C

Explanation: AI Ethicists are the "fairness detectives" of the AI industry. As AI becomes more powerful, the potential for harm grows too, and Ethicists are the conscience that helps make sure progress does not come at the cost of fairness.

Q4 [Type: MCQ | Difficulty: Easy | QID : 54836]

The future of work is best understood as humans versus machines - a competition where AI will eventually replace most human workers.

- A. True
- B. False

Correct Answer: B (False)

Explanation: The future of work is not human versus machine; it is human WITH machine. AI handles scale, speed, and pattern recognition; humans provide judgment, empathy, ethics, and creativity. The most successful systems are collaborations, not competitions. Every technology shift creates new jobs and reshapes old ones - and you are perfectly positioned for this one because you understand AI from the inside.

Q5 [Type: MCQ | Difficulty: Medium | QID : 54837]

Even as AI becomes more capable, careers in teaching, medicine, art, and law will continue to need humans for the judgment, empathy, and creativity that AI cannot provide.

- A. True
- B. False

Correct Answer: A (True)

Explanation: The "Empowered" career lane is built on the opposite premise: AI-Powered Teachers, AI-Augmented Doctors, AI-Assisted Artists. AI takes over repetitive tasks so humans can focus on what they do best - judgment, empathy, creativity. The cashier example shows the same pattern: AI handles the boring parts; humans focus on connection, care, and complex problems. In every field the course covers, the AI-augmented human is more powerful than either alone.

Q6 [Type: MCQ | Difficulty: Medium | QID : 54838]

You need to be a software engineer or computer scientist in order to have a career that involves AI - there are no meaningful AI careers for people whose main interests are art, teaching, healthcare, or law.

- A. True
- B. False

Correct Answer: B (False)

Explanation: The Empowered lane exists exactly for this reason. AI-Powered Teachers, AI-Assisted Artists, AI-Augmented Doctors, and AI Policy Advisors all use AI to supercharge their existing fields without being engineers. The Guardian lane (Ethicist, Compliance Analyst, Policy Advisor) also includes strong non-engineering paths. Only one of the four lanes - Builders - is heavily engineering-shaped.

Q7 [Type: MCQ | Difficulty: Easy | QID : 54841]

AI careers are grouped into four "lanes." Which of the following is one of those four lanes?

- A. The Coders
- B. The Builders
- C. The Operators
- D. The Repairers

Correct Answer: B

Explanation: The four lanes are Builders, Deciders, Guardians, and Empowered. Builders create the tools and models; Deciders figure out what to build and why; Guardians ensure AI is safe and fair; Empowered use AI to supercharge their existing careers.

Q8 [Type: MCQ | Difficulty: Easy | QID : 54844]

Three main ways AI is changing work are: automates repetitive tasks, augments human skills, and creates new careers. Which of the following is NOT one of those three?

- A. AI automates repetitive, time-consuming tasks
- B. AI augments human skills, making us faster and more creative
- C. AI creates entirely new careers that did not exist before
- D. AI permanently eliminates every job once held by a human

Correct Answer: D

Explanation: AI automates, augments, and creates - but it does not eliminate work overall. Just as farming and factory work shifted but did not disappear, AI is reshaping work rather than ending it.

Q9 [Type: MCQ | Difficulty: Medium | QID : 54846]

Which AI career lane does a Data Scientist most naturally belong to?

- A. The Builders
- B. The Empowered
- C. The Deciders
- D. The Guardians

Correct Answer: C

Explanation: Data Scientists analyse huge amounts of messy data to find hidden patterns and stories - their insights help companies decide what to build, what to sell, and what customers want. That decision-shaping role places them squarely in the Decider lane, alongside AI Product Managers, Solutions Architects, and Chief AI Officers.

Q10 [Type: MCQ | Difficulty: Medium | QID : 54847]

A Robotics Engineer who designs warehouse robots, self-driving cars, or Mars rovers belongs to which lane?

- A. The Builders
- B. The Deciders
- C. The Guardians
- D. The Empowered

Correct Answer: A

Explanation: Robotics Engineers build the AI tools, models, and physical machines that interact with the world. They sit alongside Prompt Engineers, ML Engineers, and AI Engineers in the Builder lane.

Q11 [Type: MCQ | Difficulty: Hard | QID : 54849]

A team is about to launch a product. A team member notices that the AI might be unfair to a particular group of users and recommends pausing the launch to investigate. Which "AI-era skill" is the team member most clearly using?

- A. AI Literacy
- B. Creativity
- C. Communication
- D. Ethics

Correct Answer: D

Explanation: Ethics is the "should we?" skill - knowing the difference between what AI can do and what it should do. The team member is exercising it by stopping to ask whether the AI is fair before shipping. Critical thinking and judgment also apply, but the trigger here ("might be unfair") is squarely ethical.

Q12 [Type: MCQ | Difficulty: Medium | QID : 54852]

In the playground design example, the AI generated 20 layouts, checked safety rules, and estimated costs in seconds. The human chose the design with the most shade, added a mural by local art students, and considered what kids in the neighbourhood actually like. What does this example most clearly illustrate?

- A.** The winning formula combines AI's scale and speed with human wisdom, empathy, and context - neither could create as good a playground alone
- B.** AI will eventually do the entire job alone
- C.** The humans are unnecessary once the AI has done its work
- D.** Humans should stop using AI in design tasks

Correct Answer: A

Explanation: This is the "AI + Human Judgment" core message in action. The AI handled what AI does best - generating options, checking rules, doing math. The humans handled what humans do best - empathy for the community, aesthetic judgment, contextual knowledge. The result is something neither could have made alone.

Q13 [Type: MCQ | Difficulty: Medium | QID : 54854]

According to Alvin Toffler, who will be the "illiterate" of the 21st century?

- A.** Those who cannot read or write
- B.** Those who cannot learn, unlearn, and relearn
- C.** Those who do not have a degree in engineering
- D.** Those who cannot use AI tools

Correct Answer: B

Explanation: Toffler emphasises the "Adaptability Mindset" as the key to navigating a changing world. Many of the careers you will hold might not exist yet, and the tools you will use have not been invented - curiosity and the ability to keep learning are what will always be in demand.

Q14 [Type: MCQ | Difficulty: Medium | QID : 54857]

A game designer imagines a character that has never been seen before - a clockwork dragon that breathes steam instead of fire, with brass gears for scales. Which AI-era skill is being used most directly?

- A. AI Literacy
- B. Empathy
- C. Communication
- D. Creativity

Correct Answer: D

Explanation: Creativity is "imagining what has never existed." Inventing a brand-new character concept that no AI has produced - and that the designer can then guide AI to help build - is the defining example of creativity in the AI era.

Q15 [Type: MCQ | Difficulty: Hard | QID : 54860]

A law student is interested in how AI is changing legal practice. They want to be prepared for a career as a lawyer in the AI era. Which approach would best position them?

- A. Avoid all technology classes and focus only on traditional legal training methods and casework
- B. Skip law school entirely and pursue a career as an AI engineer at a tech company instead
- C. Build strong legal expertise alongside knowing how AI tools work in legal practice
- D. Hope that AI replaces all lawyers before they graduate so the career question becomes irrelevant

Correct Answer: C

Explanation: The durable legal career in the AI era combines legal expertise with AI fluency. Lawyers who can use AI effectively are more productive; legal judgment remains human. Avoiding technology sets up future irrelevance; switching careers redirects away from genuine interest; hoping for replacement is fatalistic and inaccurate.

Q16 [Type: MCQ | Difficulty: Hard | QID : 54865]

A college student is excited by an emerging fintech AI role building credit decision and fraud detection systems, but worried about ethical complexities - they have read about AI bias affecting people of colour in lending. What is the most thoughtful framing for their decision?

- A.** Financial AI shapes major life outcomes, so people with technical skills and ethical commitments have real power to make systems fairer
- B.** Ethics concerns mean the student should avoid all AI-related finance careers and pursue a traditional banking role instead
- C.** The student should pick whichever path has the highest starting salary, since financial security matters more than ethical considerations
- D.** Ethical concerns about AI bias will resolve themselves over time as the technology matures and regulations catch up, so they are not worth weighing heavily in this career decision today

Correct Answer: A

Explanation: Financial AI decides who gets approved for loans, who gets flagged for fraud - the stakes are real. Technical skills combined with ethical commitments give the student power to make those systems fairer than they would be without ethically-minded people inside them. Avoiding the field entirely (B) means leaving those decisions to people without the same commitments.

Q17 [Type: MCQ Scenario | Difficulty: Medium | QID : 54868]

Scenario: A company proposes an AI feature that would automatically assign final letter grades (A, B, C, D, F) to every student essay with no teacher review. The grade goes directly onto the student's transcript.

Question: As a member of the AI Ethics Committee, what is the right vote, and why?

- A.** Approve - automatic grading saves teachers significant time and lets them focus on other classroom responsibilities
- B.** Reject - AI grading systems often crash and lose student data during peak usage times
- C.** Reject - final grades affect a student's future and require a teacher's understanding of effort, growth, and context
- D.** Approve, but only if the AI is more than 95% accurate at predicting what a teacher would assign for the same essay

Correct Answer: C

Explanation: AI lacks empathy and contextual understanding of a student's situation. Decisions that affect a student's future must keep a human in the loop - that is the non-negotiable safeguard. A grade is not just a measurement; it carries weight into a student's future, and only a teacher who knows the student can issue it fairly.

Q18 [Type: MCQ Scenario | Difficulty: Hard | QID : 54871]

Scenario: A company proposes an AI feature that sends a weekly report to parents ranking each child against every classmate by essay quality.

Question: As a member of the AI Ethics Committee, what is the right vote, and what is the strongest reason?

- A.** Approve - parents have a right to know how their child compares to classmates and use that information to support their learning at home
- B.** Approve - competition motivates students to work harder and produce better essays over time, improving overall classroom performance
- C.** Reject - sending weekly reports would overwhelm parents with too much email and cause many of them to ignore important school communications
- D.** Reject - public student-to-student rankings cause anxiety and shame, reduce learning to a number, and miss context a teacher would communicate with care

Correct Answer: D

Explanation: The harm is not about accuracy - it is about wellbeing and dignity. Ranking children publicly is the kind of decision a human teacher would handle with care and individualised feedback, and AI cannot replicate that judgment. This is an ethics-and-empathy violation regardless of how the ranking is technically delivered.

Q19 [Type: FRQ - Short Answer | Difficulty: Hard | QID : 54872]

Scenario: Read each of these three short profiles.

Profile A: Maya analyses millions of customer purchase records to find hidden patterns that help her company decide which products to launch next year.

Profile B: Theo writes detailed, structured prompts that get generative AI models to produce exactly the images and copy a marketing team needs.

Profile C: Priya works with a government agency to research how a new facial-recognition AI affects citizens' privacy rights and recommends new rules.

Question: For each profile, name the AI career lane (Builders, Deciders, Guardians, or Empowered) and briefly justify your choice.

(Respond in 3–4 sentences.)

Model Answer: Maya is a Decider - specifically a Data Scientist - because she turns messy data into insights that drive business decisions, which is exactly what Deciders do. Theo is a Builder - a Prompt Engineer - because he creates the precise instructions that make generative AI models produce the right output, sitting alongside ML Engineers and AI Engineers in the Builder lane. Priya is a Guardian - an AI Policy Advisor - because her job is to research how AI affects society and shape the rules that keep people safe, which is the defining work of the Guardian lane. Together they show how AI careers cover making, deciding, and protecting - and that you do not have to be an engineer to have a meaningful AI career.

Q20 [Type: FRQ - Scenario Analysis | Difficulty: Hard | QID : 54874]

Scenario: A startup is launching an AI tool that suggests which job applicants a hiring manager should interview, based on their resumes. The startup proposes three features:

Feature A: The AI automatically rejects 80% of applicants before any human ever sees their resume.

Feature B: The AI ranks applicants and highlights specific strengths (e.g., "5 years of project experience"), then a human recruiter reviews every recommendation before any decision is made.

Feature C: The AI is audited regularly by an AI Ethicist on the team to check that it does not systematically disadvantage any group.

Question: For each feature, decide whether the AI Ethics Committee should APPROVE or REJECT, and briefly explain your reasoning using concepts from this material (Human-in-the-Loop, judgment, ethics, AI augmentation, the Guardian role, etc.).

(Respond in 3–4 sentences.)

Model Answer: Feature A should be Rejected: an AI that automatically rejects most applicants before any human reviews them removes Human-in-the-Loop from a decision that affects people's livelihoods, and the AI lacks the judgment to consider context like a non-traditional career path or a particularly strong cover letter. Feature B should be Approved: this is AI augmentation done right - the AI surfaces useful information at scale, but a human recruiter applies judgment and is accountable for every decision. Feature C should be Approved: regular ethics audits guard against bias and reflect the Guardian role, which is essential whenever AI affects fairness and access to opportunity. Together, B and C illustrate the winning formula - AI handling scale and speed while humans (and AI Ethicists) provide judgment, fairness, and final accountability.
